

DENACAM

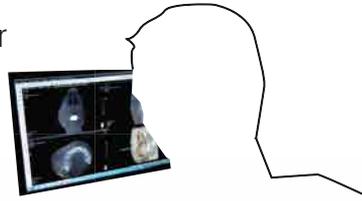

The innovative 3D
realtime navigation system
for implantology

We help physicians improve patient experience, surgical outcome and practice productivity in dental implantology

Pre-Operative

CBCT with dual-mode marker and implant planning

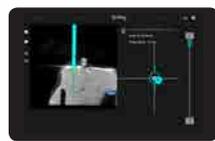

Preparation

Import patient case and registration of drill

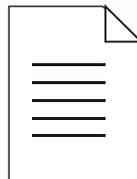

Implant Procedure

Navigated implant surgery

Post-Operative

Export of protocol

Easy handling + Easy integration = **DENACAM**

DENAOPT

Miniaturised optical unit fully integrated with surgical handpiece for maximum comfort comparable to freehand surgery

DENATRAY and **DENAMARK**

Dual-mode, high precision ceramic marker for non-invasive application

DENAREG

Registration tool for calibration of drills, automatic recognition of drill sequence

DENASOFT

Intuitive navigation software with real-time and 3D target tool

DENACART

All-in-one solution for seamless integration in practice workflow

The **DENACAM** system

Miniaturized and ergonomic design

Miniaturized camera system attached directly to the handpiece for maximum ergonomic comfort close to freehand surgery

Compatible with commonly used handpieces and drills

Integration with existing practice infrastructure
Auto-registration of most manufacturer's drill, no manual calibration needed

Cost-effective treatment in one session possible

Streamlines cost- and time-efficient workflow from diagnostics to planning, intraoperative guidance and quality control

Real-time 3D navigation

Sub-millimeter accurate position, angulation and depth control, displayed on an interactive 3D interface

Non-invasive and miniaturized tray and marker for optimal patient comfort

Open interface to common planning software packages

Intuitive software that can be used with existing infrastructure

Works with existing Cone Beam CT systems
